At the sources of traditional music

This recording is a collection of pieces taken from the two most famous 16th and 17th century treatises on dancing. Published in 1588 in the form of a dialogue between a dancing master and his pupil, the *Orchésographie* by Jehan Tabouret, *alias* Thoinot Arbeau, is probably the most widely used practical treatise in the history of the dance. Intended more for couples of dancers (the *Orchésographie* dealt with groups of dancers), *The English Dancing Master*, compiled in 1651 from English ancestral country dances, was equally successful and went through no fewer than 18 printings in twenty-four years! These two collections contain the most celebrated dances in the traditional repertoire.

Künstler Komponisten

- Jeremy Barlow • Thoinot Arbeau
- Leitung • John Playford

Programm
